

Wehunt Farm

Tune® delivers 24.4% kWh savings at the Wehunt Farm.

The Wehunt Farm is a two-house egg-laying operation in Carnesville, Georgia. Each house is 100,000 square feet and is home to many electricity-driven systems. Conveyors, automatic watering and feeding systems, and cooling fans are just a few. In September 2021, Tune® devices were installed and had an immediate and positive effect on the farm's kWh consumption.
